1.0 Introduction

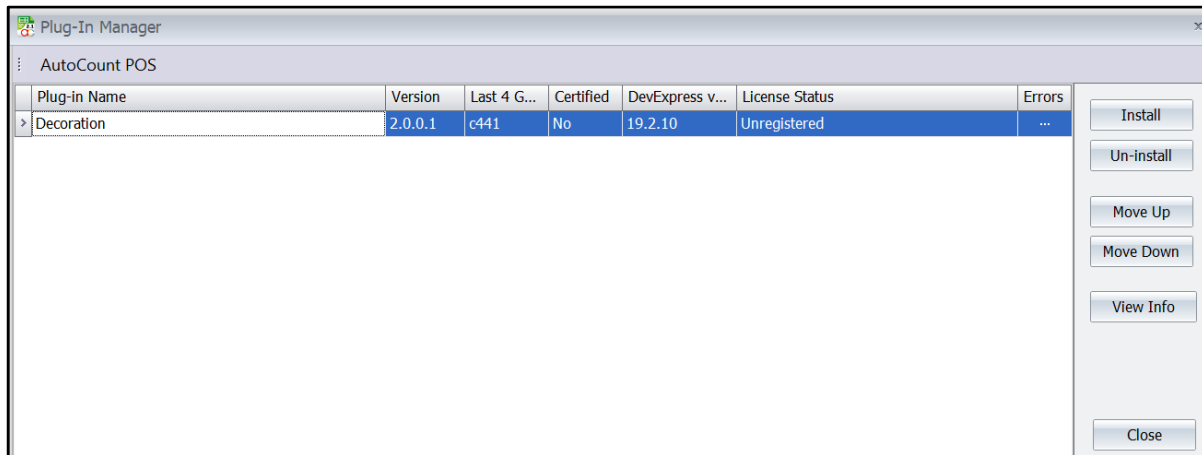

The Decoration plugin is a valuable tool specifically designed for professionals in the decoration glass industry. It enables users to calculate the precise cost of item dimensions with accuracy and efficiency. By streamlining the process of cost estimation, this plugin ensures optimal precision and effectiveness in determining the expenses associated with different glass decoration projects.

By introducing additional columns, users can now input pertinent item information, which in turn facilitates the calculation of the updated total value for each item. The total value is determined by applying a specific formula: **$(Height * Width / 144 * Deco Unit Price) + (Border Length / 12 * Border Unit Price)$** . The inclusion of these new columns in sales documents greatly assists users in accurately assessing the value of selected glass products. This enhanced functionality ensures precise and efficient calculations, enabling users to make informed decisions and effectively manage pricing for glass items based on their specific dimensions and decorative features.

The newly introduced reports serve the purpose of providing users with a comprehensive view of selected glass products and their corresponding border information. These reports offer a consolidated overview, allowing users to access and analyse the specific details related to the glass and its associated border.
